From small-scale innovation to urban transformation

The activities developed in the parking would propose a dynamic use of the space that can be beneficial not only to the residents of the city, but also to the passengers travelling from different countries and visiting Lille. People transferring from Gare Lille Europe to Gare Lille Flandres would be able to take a walk through the squares and actually enjoy a concert, a warm meal or an explanation of how mycelium works and it's produced.

For our team, the future of the carpark goes beyond the development of a specific programme, but rather spreads to questions related to use of those spaces and the engagement of the residents in local social economic questions.
